• Summary:

Patient C.L.M, 22 years of age, resident of Villavicencio, Colombia, single, known as of February 6th 2012, diagnosed with severe haemophilia A including complications such as high response inhibitor and haemophilic arthropathy; did not accept immunotolerance for the eradication and the cells producing it; continues with tertiary pharmacological prophylaxis with factor VII r 6 mg IV three times per week at a rate of 90mcg per kg doses. Works and studies on occasion, does not exercise and refuses to quit his high-powered motorbike.

• Haemorrhages during 2017:

For which **12mg** of activated factor VII r were prescribed per each event: Left elbow **(2)**, left and right knee **(7)** and right ankle **(3)**.

On the year 2017 he received **936 mg** of factor VII r in prophylaxis and **144 mg** in urgencies. For a grand total of **1080 mg**. The price per mg is **567 USD** to an approximate total of **612.618 USD** (*2.144.163.000 COP); in one year per patient.

Treatment with subcutaneous emicizumab as of August 2018 at a rate of **65 mg** per week with excellent tolerance; as of then has not presented haemorrhage; targeted articulations: **right elbow, knees and right ankle.**

During the past year he has felt in optimal health conditions, it is observed that the patient is in overall good condition, supportive, works as a deliveryman. His attitude is assertive, his appreciations and perspectives on the future are both mature. Both his attitude and his affections have changed, and he himself affirms it.

• Conclusions

1. C.L.M has a good life quality.
2. Around half a million USD have been saved to the system, just in factor.
3. Up to this date no haemorrhagic urgency has presented itself since August 2018
